

HIGH PURITY WATER SOFTENER SALT

This product is designed for the regeneration of nano-type ion exchange resin. The content of sodium chloride (NaCl) is over 99.5 %. The purity of the salt ingot is high, the color is pure white, the particles are full and the hardness is high, ensuring that the regenerant can be completely dissolved and even.

Inspection item Test result

Sodium chloride 99.57%

Moisture 0.08%

Water insolubles 0.05%

Calcium, magnesium, not detected

ATS high-performance softening salt ingots with high purity, no impurities, high solubility, no powder and bridging, ensuring that the resin will not be contaminated and damaged, so that the brine tank can be kept clean for a long time and can extend the resin. Life expectancy, greatly increasing resin regeneration capacity °
